WORKING POPULATION PROFILE EXPLANATORY NOTES

INTRODUCTION

1. The Working Population Profile provides 19 tables available for Statistical Local Areas (SLAs) and larger areas, comprising more detailed versions of some of the basic profile tables, plus new tables for the following geographic levels: SLA, LGA, SSD, SD, State, Australia.
2. Information was collected from the 2001 Census of Population and Housing.
3. Each table title in the Working Population Profile consists of two parts. The first part lists the variables included in the table. The second part describes the table population.
4. A glossary of terms and concepts used in the Working Population Profiles appears below.

5. For more information on classifications and Census concepts see the 2001 Census Dictionary (Cat. No. 2901.0).

GLOSSARY

Birthplace	6. There are 3 birthplace variables. Birthplace of Individual (BPLP), which records a person's country of birth, and Birthplace of Female Parent (BPFP) and Birthplace of Male Parent (BPMP), which indicate whether a person's parent was born in Australia or overseas. Prior to 2001, parental birthplace was coded to a country.
Employed full-time/ part-time	7. 'Employed full-time' means that the person worked 35 hours or more in all jobs during the week prior to Census night. 'Employed part-time' means that the person worked less than 35 hours in all jobs during the week prior to Census night. 8. For Census purposes, people who stated they were employed, but worked zero hours in the week prior to Census night have been coded to 'employed part-time'.
Fact Sheets	9. Fact Sheets have been prepared to provide further information on Census data and concepts.
Industry	10. The industry classification is an indication of the main job only.
Nfd	11. Nfd means 'not further defined'.
Occupation	12. The occupation classification is an indication of the main job only.

Place of
enumeration

13. The Census count, based on place of enumeration, is a count of every person who spent Census night in Australia. People are counted where they are on Census night, which may not be where they usually live.

Table population

14. Table population is a description of what the table is counting. For example, tables containing marital status usually have a table population of persons aged 15 years and over. The population appears under the table title.

DATA QUALITY

15. Journey to Work data is based on an employed person's usual workplace for the main job held in the week prior to Census Night 2001. If a person stated that they were employed but did not state their workplace address were coded to the 'Not Stated' category. The 'Not Stated' category is included at the Australia level, but is not included in the State and Territory figures. Therefore State and Territory data may not aggregate to Australia level as their State or Territory or employment cannot be determined.

16. The Census is subject to a number of inaccuracies resulting from errors by respondents or mistakes in collection or processing of the data. Some of these are overcome or 'repaired' by careful processing procedures and quality management of the processing itself. The effect of those that remain is generally slight, although it may be more important for small groups in the population. The main kinds of error to keep in mind are:

Partial non-response

17. In some cases where an answer was not provided to a question an answer was imputed or derived (often from other information on the form). In other cases a 'not stated' code was allocated.

Processing error

18. While such errors can occur in any processing system, quality management is used to continuously improve the quality of processed data, and to identify and correct data of unacceptable quality.

Random
Adjustment

19. Cells containing small values are randomly adjusted to avoid releasing information about particular individuals, families or households. The effect of random adjustment is statistically insignificant.

Respondent error

20. Processing procedures cannot detect or repair all errors made by persons in completing the form, therefore some may remain in final data.

Undercount

21. Although the Census aims to count each person once, there are some people who are missed and others who are counted more than once. A post enumeration survey is conducted soon after the Census to measure the undercount.
